XXX Installation Guide

How to Install PuTTY on Windows. Download & configure

This document provides detailed instructions for installing PuTTY on Windows 10, 8, or 7. However, installation should be very similar on other versions of Windows as well.

Step 1 : First you need to obtain a copy of the installation package (e.g., putty-<version>-installer.msi). If you have a 64-bit computer, it is recommended that you install the 64-bit version putty-64bit-<version>-installer.msi. Use this [link](#) to download.

Package files

You probably want one of these. They include versions of all the PuTTY utilities (except the new and slightly experimental ones). (Not sure whether you want the 32-bit or the 64-bit version? Read the [FAQ entry](#).)

MSI ('Windows Installer')

64-bit x86:	putty-64bit-0.77-installer.msi	(or by FTP)	(signature)
64-bit Arm:	putty-arm64-0.77-installer.msi	(or by FTP)	(signature)
32-bit x86:	putty-0.77-installer.msi	(or by FTP)	(signature)

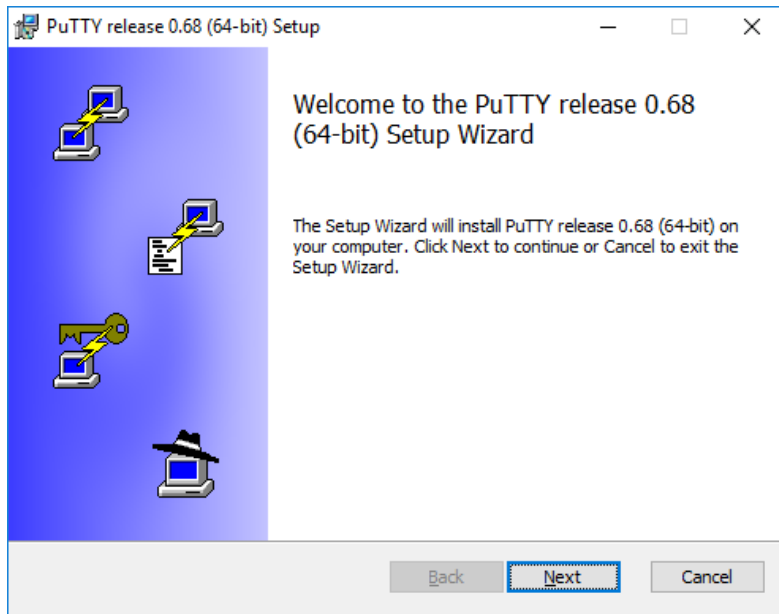

Unix source archive

.tar.gz:	putty-0.77.tar.gz	(or by FTP)	(signature)
----------	-----------------------------------	-----------------------------	-----------------------------

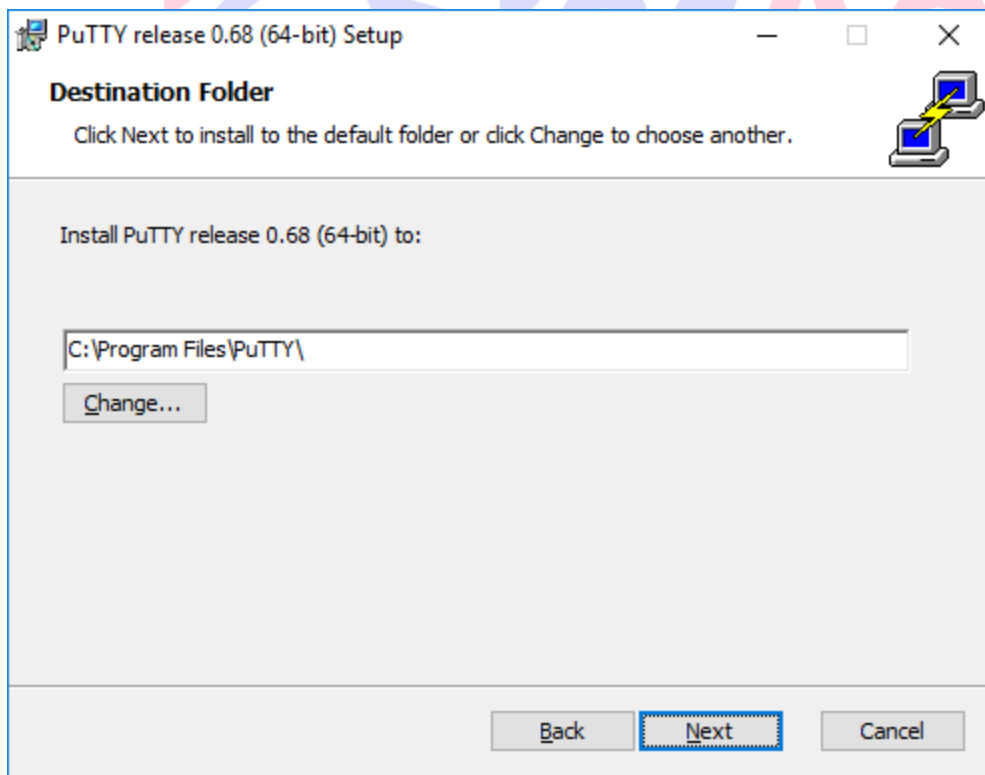

Step 2 : Start the installer.

On Windows 10, the Edge browser offers to run the installer when the download is complete. Just click to install the software. On older versions of Windows, you may need to run the installer manually.

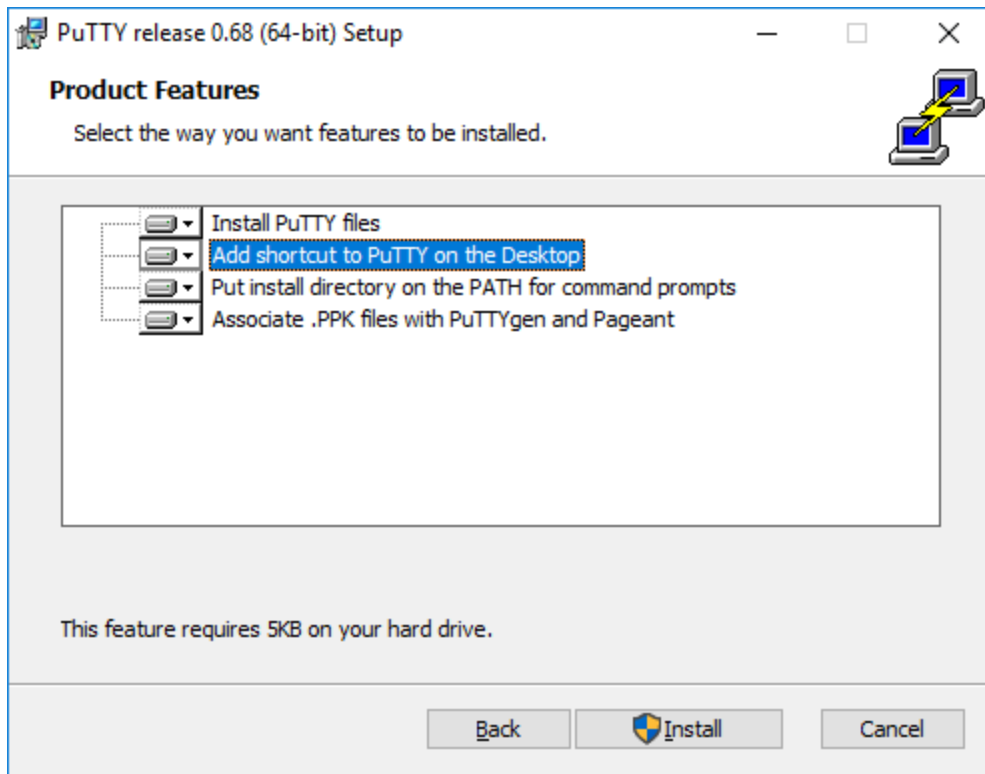

Step 3 : When the installer starts, It shows the welcome screen. Just click **Next**.

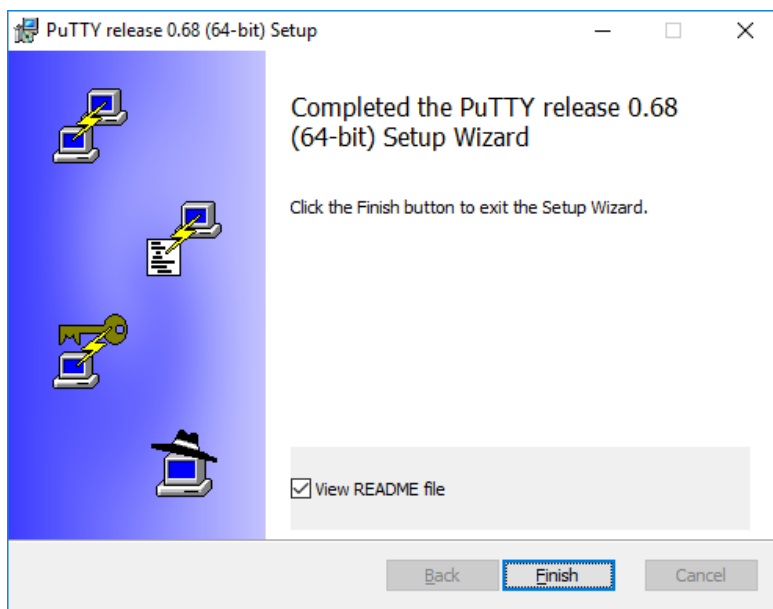

Step 4 : The installer then asks for the Destination folder in which to install the software. Almost always it is best to use the default value. Just click **Next**.

Step 5 : the installer asks to select product features to install. Click Install.

Step 6 : When the installation has completed successfully, it should show a "Completed" screen. Click **Finish** to exit the installer.

Convert your private .pem key to .ppk using PuTTYgen

How to RUN Putty :

Once installation successfully completed, you should test to make sure that PuTTY runs correctly, and you can find the program. you should be able to find the software from the Windows Start menu in the bottom left corner of the screen and start the software.

When the software starts, you should get a window with the title "PuTTY Configuration" with a field **Host Name** in the upper middle part. Try entering a host name to connect to in that field and click **Open**.
